

7 Reasons to Choose a Composable Infrastructure

If you want to keep ahead of your competition, you need to be able to accelerate time to market and develop new applications when the idea first arises—not after the competition already has its second version of a product out. How can you do so while having the resources you need at your fingertips without overpaying for them?

Composable infrastructure is the answer. With the help of a programmable and software-defined composable infrastructure like HPE Synergy, offered through our partnership with Hewlett Packard Enterprise, you can access, configure, and reconfigure your pooled resources, like HPE SimpliVity, powered by Intel® Xeon® processors, as needed for your workflows. Once you're done utilizing the resources, they're placed back into the pool for their next use.

Are you ready to reduce operational complexity and thrive in a technology-centric world? Use this checklist to see if your company needs composable infrastructure.

- Need to deploy an IT infrastructure that better supports legacy apps and enables standing up new cloud-based apps faster
- Need an IT infrastructure that can grow with ease to support Big Data and the Internet of Things
- Need to reduce overprovisioning of siloed resources while increasing speed, control, and efficiency
- Need to automatically optimize any application
- Need to accelerate IT services delivery
- Need to integrate and automate infrastructure operations and applications
- Need to reduce CAPEX and lower operating costs

If you answered yes to any of these items, chances are you're ready for HPE Synergy.
